

Linear maps strongly preserving Moore-Penrose invertibility

María Burgos Navarro¹, A. C. Carlos Márquez-García ², A.
Morales-Campoy ²

Let A and B be C^* -algebras. We investigate linear maps from A to B strongly preserving Moore-Penrose invertibility where A is unital, and either it is linearly spanned by its projections, or has real rank zero, or has large socle.

Keywords. Moore-Penrose inverse, generalized inverse, C^* -algebra, linear preserver
